*Loyal companions  
for life*

The world of SENER revolves around cuddly animals, hand puppets, grabbing toys, furniture and much more – always around to bring joy and comfort.

SENER was founded over 30 years ago by Sabine and Volker SENER. To this day, they both work on each product design with their own needle and thread. Paired with the fact all of our toys are hand-tailored, it means every product is unique in its own way. Our experience has shown that the first toy a child loves earns a very special place in their heart that cannot be replaced, which is why we put so much attention to detail in all our products.

Sustainability is also at the heart of our brand, ensuring we use robust, quality materials that are free from harmful chemicals. This is especially important due to the close physical contact between a child and their toy – sure to guarantee a long-lasting companionship.

When selecting our materials, we pay particular attention to ensuring they originate from Germany – including sourcing new sheep’s wool from wandering sheep from the Eifel region, spelt from the Swabian Alb and cherry wood from the Ore Mountains.

We hope that you find a SENER friend for life and wish you lots of fun with our faithful companions.

With love  
for our products

Finished in high-quality materials  
from Germany

Toys, cuddly animals and baby  
furniture you will love

Organic  
Certified by  
CERES-CERT AG  
CERES-1087

*Proudly  
GOTS  
certified*

GOTS (Global Organic Textile Standard) is the world's leading textile processing standard for organic fibres. As an independent, non-profit organisation, it includes ecological and social criteria in the production of textiles. The entire textile supply chain is subject to an independent and transparent certification process.

We are proud that our products are GOTS-certified. Our in-house sewing workshop in Latvia has been recognised for its excellent craftsmanship for several decades. Crafting our cuddly toys is a complex art that takes a great deal of skill and a keen sense of form and aesthetics. It's this expertise that brings our animals to life.

## *Highlights for baby's bedroom*

Your little one's room can be transformed into a cosy paradise. A goose beanbag for cuddling up and seating is the first place to start. We round this off with an updated cushion, colourful mobiles and the popular Cosy Nap which we can now finally offer you again.

# Music boxes

With Brahms' "Good Evening, Good Night", they soothe babies gently off into the land of nod. Our music boxes are finished in cotton or wool plush, as well as cotton velvet and filled with new sheep's wool, which makes them extremely soft and cuddly.

## Cuddly animals – everyday favourites

Our cuddly animals are more than just cute and snuggly. Thanks to the removable heat pad inside, filled with organic spelt chaff, grape seeds or cherry stones, they can be both warm and cooling as needed. These properties transform cuddling a toy into a whole new experience.

Our cuddly geese in particular prove that many adults also love having a faithful travel companion, be it as a travel pillow, breastfeeding pillow or decoration on the sofa.

## *Floppy animals – cuddly friends for all ages*

Their long arms and legs are inviting both for cuddles and playtime. What's more, all of our floppy animals are made of environmentally-friendly cotton plush and new sheep's wool, which is why there's no need to worry if your child puts their cuddly friend in their mouth. The handy 30 cm floppy animals are more suitable for small children, while the 40 cm cuddly animals are very popular with older siblings.

# Animal babies: small toys with a big impact

Our cuddly animal babies have been created with the tiniest of toys in mind. With an easy-grab size of approx. 20 cm, nothing stands in the way of your child curling up with one, even in their first few months. Just like their larger friends, the Floppy animals, the baby versions are made from cotton plush or velvet and filled with pure new sheep's wool from the Eifel.

## The perfect bag for those little essentials

Our bags have room for all kinds of little essentials. Made from soft and cuddly cotton plush, they make the perfect companion for heading out and about. Thanks to their zip fastener, they also work well as a purse or for treasuring little secrets. That means there's room for their first pocket money as well as any special trinkets they find on the go.

# Raise the curtains for the hand puppets

There are no limits to the imagination when playing with our hand puppets. The world is a stage! And for the big première, a stage can quickly be set up with a pair of chairs and some sheets.

Whether put together by kids or adults, this is where stories come to life. As with all the cuddly animal ranges from SENER, these plushy friends are also hand-finished. They are soft and snuggly, approx. 35 cm in size and produced using eco-friendly cotton.

Furthermore, the heads and legs of the puppets are each filled with new sheep's wool from the Eifel region.

### How do I warm my cuddly toy properly?

Please remove the cherry stone or grape seed pillow to warm it up, because only this may be heated, not the whole animal. Simply open the zipper at the bottom of the animal's belly. The pillow can then either be put in the microwave for about ½-1 minute at a maximum of 600W or in the oven at 75 degrees Celsius for about 3-5 minutes.

Make sure that it does not get too hot, otherwise there is a risk of burns on the skin or the risk of overheating, especially for newborns. The cherry stone or grape seed pillow should not be heated too long or too much, otherwise the pillow can start to burn.

Please remove the spelt husks pillow through the opening in the belly of the cuddly animal and heat it in the oven at a maximum of 75 ° C for approx. 2-3 minutes. Environmentally friendly and gentle at the same time, the pillow can also be warmed on the heater or tiled stove. The pillow should never be heated in the microwave, otherwise it will burn!

Spelt husks are simply the shell of spelled grains. Therefore, the heat storage is not comparable with the cherry stones or grape seed pillows. In the case of the spelt husks pillow, the air in the cavities between the husks is warmed up, especially while cuddling with the pillow, while in the case of the cherry stones and grape seeds, the entire core can store the heat for a longer period of time.

### Why does the animal fluff so much at the beginning?

After every production step each animal is blown with compressed air and at the end both brushed and vacuumed. Nevertheless, loose fibers cannot be completely avoided, especially when removing the inner cushions. The woven plush of the white animals is only washed after weaving and is otherwise neither dyed, bleached, or otherwise treated.

However, since cotton is a natural fiber, individual particles of the fiber always stick out, like human hair. The coloring of the other fabrics ensures that the particles stick together firmly, which is not the case with our white plush.

Therefore, the white plush is dustier, especially at the beginning of usage, which is completely harmless. It is an untreated natural fiber that is not dangerous. The lint is either lost during use or can simply be vacuumed off. This works best with the suction attachments for the sofa and armchair. Thorough tapping outdoors will also help reduce lint.

Cherry stone or grape seed pillow:  
½-1 minute in the microwave at a maximum of 600W or 3-5 minutes at 75 degrees in the oven

Spelt pillow:  
Environmentally friendly on the heater or while cuddling or 2-3 minutes at 75 degrees in the oven

Cotton is a natural fiber. The undyed fibers of our white plush friends hold together less tightly than dyed cotton fiber. This causes the stuffed animals to lose fibers and particles. Simply vacuum up excess fibers with an upholstery attachment.

## How do I wash my cuddly toy properly?

If the animal gets dirty, you can first remove the coarse dirt with a brush. Since we only use natural fibers of the best quality and no polyester, heavy washing is usually not necessary. Since our dear little animals are filled with pure sheep's wool from the Eifel, we generally recommend hand washing with mild detergent or wool detergent. Unfortunately, the little ones do not tolerate strong spinning, because this leads to irreversible clumping of the wool.

The water temperature should not be too high and plenty of water should be used. You can then dissolve a little wool detergent and then move the animal loosely in it. Before doing this, however, you should soak it with clear water of the same temperature. Please do not rub, brush, spin or wring when washing. After washing, squeeze it out carefully and let it dry on a towel. The wet smell of wool disappears after drying.

When drying, move the animal regularly, this makes the drying process easier. The animals stuffed with cotton can also be washed by hand or in a gentle wash cycle in a mild detergent. Again, avoid using strong spinning, otherwise too many lumps will remain in the cotton. Basically, small lumps can also occur when washing by hand; this cannot be avoided with natural fibers.

We recommend hand washing with mild detergent or wool detergent. Please do not wring, rub or brush. After washing, squeeze out carefully and leave to dry lying on a towel.

## Why did the colours run when I put the cuddly animal in the wash?

We use two different techniques to dye our fabrics. Substantive dyeing is primarily used for paler colours while the second technique, reactive dyeing, is mainly used for bolder, darker shades. Fabric softener should be avoided on fabrics dyed using both of these techniques.

With reactive dyeing, the fabric is first bleached using chlorine-free bleach before it is dyed to ensure an intense, long-lasting effect.

All of the dyes we use are free from lead and other damaging additives. No azo dyes are used as a matter of principle.

In dyeing our fabrics, we aim to create a secure bond between the dye and the fabric, obtained through, among other things, the heat that is applied in the dyeing process.

If brown discoloration should appear after washing, particularly on white toys, the product was left in the water for too long or was not wrung out properly after washing. If the fabric is left wet for a long continuous period, the dye from the warp yarn of the woven plush begins to bleed and the colour is transferred to the toy. Washing the item for a second time generally helps here.

## Why does my animal smell so strange?

The majority of our friends for life are filled with sheep's wool from controlled organic animal husbandry, which we obtain from wandering shepherds in the Eifel. In addition to the aspect of using unpolluted natural fibers, for which no environmentally harmful substances are required, sheep's wool offers several advantages: It filters pollutants from the room air, has a temperature-regulating effect and absorbs moisture.

The smell is caused by lanolin, the natural wool fat that protects against dirt and makes the wool waterproof. It also protects the individual wool hair from drying out and becoming scratchy, the filling remains stable and cozy. The smell disappears after a while, but never completely. Especially after washing, the filling smells stronger at first, but that subsides again. Here it helps to store the animal at fresh air or it in the freezer for a few hours (only dry!). Then let it dry well again.

The smell of the wool comes from lanolin, the natural wool grease, and protects it against soiling.

It disappears after some time, but never completely.
